

Supplementary Figure Legend

Figure S1. Identification of lncRNAs differentially expressed in the liver of hyperlipidemia mice. Serum(A) and hepatic (B) lipid levels of mice after ND and HFD treatment for 23 weeks (n=4/group). (C) RT-qPCR analysis of lncRNA expression levels of mice after ND and HFD treatment for 23 weeks (n=3/group). All values are as Mean \pm SEM. * $p < 0.05$, ** $p < 0.01$, *** $p < 0.001$.

Figure S2. Characterization of the non-coding property, expression profile and sub-cellular location of lncRHL. (A) Nucleotide sequences of full-length Gm26584 analyzed by RACE. (B) Gene structure of lncRHL (Gm26584) and Rapid amplification of cDNA ends (RACE) in the mouse genome. (C) Coding potency of lncRHL sequence was analyzed using the Coding Potential Calculator (website) lncBATE1, lncLSTR served as control non-coding gene. CCAAT/enhancer-binding protein alpha (Cebp α) and Eukaryotic translation initiation factor 4F α 3 (Eif4 α 3) served as control coding genes. Scores above 0 suggest coding potential, whereas scores below 0 represent no coding potential. (D) FISH analysis in Hepa1-6 cells. lncRHL sub-cellular localization in mouse Hepa1-6 was assessed by a laser confocal microscopy. Red, lncRHL or snRNA U6 or 18S. snRNA U6 and 18S were selected as a positive control for nucleus or cytosol, respectively, blue,4',6-diamidino-2-phenylindole staining. Magnification: x400. (E) RT-qPCR analysis of lncRHL expression in primary hepatocytes in the presence or absence of 400 μ M oleic acid (OA) for 6 h (n=3/group). All values are as Mean \pm SEM. * $p < 0.05$, ** $p < 0.01$, *** $p < 0.001$.

Figure S3. Blood chemistry analysis of liver-specific knockdown of lncRHL in

mice. The samples analyzed here were from the same samples used in Fig 2. **(A-C)** Knockdown of lncRHL increases serum NEFA **(A)**, LDL-C **(B)** but decreases HDL-C **(C)** levels in mice. Levels of NEFA, LDL-C and HDL-C in serum of control (Ad-Scrambel) or lncRHL knockdown (Ad-shlncRHL) mice were measured using enzymatic kits (n=8/group). All values are as Mean \pm SEM. * $p < 0.05$, ** $p < 0.01$, *** $p < 0.001$.

Figure S4. Knockdown of lncRHL has no effect on mRNA levels of genes involved in hepatic lipogenesis and fatty acid oxidation. The samples analyzed here were from the same samples used in Fig 2. **(A)** Relative mRNA levels of genes involved in lipogenesis and fatty acid oxidation in the livers of control (Ad-Scrambel) or lncRHL knockdown (Ad-shlncRHL) mice under ND or HFD conditions. Total RNA was subjected to RT-qPCR quantification and mRNA levels were expressed relative to Ad-Scramble under ND conditions, respectively (n=4/group). **(B)** Western blot analysis of protein levels of PCSK9 and LPL in serum of control (Ad-Scrambel) or lncRHL knockdown (Ad-shlncRHL) mice under ND or HFD conditions. Albumin (ALB) as loading control of serum (n=3/group). All values are as Mean \pm SEM. * $p < 0.05$, ** $p < 0.01$, *** $p < 0.001$.

Figure S5 Knockdown of lncRHL has no effect on cell mortality of primary hepatocytes. **(A)** Relative mRNA levels of genes involved in lipogenesis and fatty acid oxidation in primary hepatocytes transfected with ssNC or sslncRHL (100 nM) for 6 h. Total RNA was subjected to RT-qPCR quantification and mRNA levels were expressed relative to ssNC control cells (n=3/group). **(B)** Apoptotic rates of mice primary

hepatocytes were measured by flow cytometry after transfected with ssNC or sslncRHL (100 nM) for 48 h. Representative flow cytometry of cells stained with Annexin V-FITC and PI (left) and quantitative analysis (right) of apoptotic cells of primary hepatocytes (n=3/group). (C) Apoptotic rates of mice primary hepatocytes were measured by TUNEL analysis after transfected with ssNC or sslncRHL (100 nM). Representative image of TUNEL staining (left) and quantitative analysis (right) of TUNEL positive cells (n=10/group). Scale bar, 40 μ m. These experiments were repeated three times with similar results. All values are as Mean \pm SEM. * p < 0.05, ** p < 0.01, *** p < 0.001.

Figure S6. Depletion of MTTP blocks VLDL secretion in primary hepatocytes with knockdown of lncRHL. 6-8 weeks old *C57BL/6J* male mice were infected with 2.5×10^{11} recombinant adenovirus particles of Ad-shNC or Ad-shMTTP through tail vein injection for 7 days. After that, primary hepatocytes were isolated and transfected with ssNC or sslncRHL (100 nM) for knockdown of lncRHL. (A) Knockdown lncRHL-induced increases in the mRNA level of *Mttp* were abolished by depletion of MTTP in primary hepatocytes. The mRNA levels of *lncRHL*, *Mttp* and *ApoB* were assessed by RT-qPCR (n=3/group). (B) Depletion of MTTP increases intracellular TAG level in primary hepatocytes with knockdown of lncRHL. The intracellular TAG level was measured using TAG assay kit and normalized to total protein (n=3/group). (C) Depletion of MTTP inhibits VLDL secretion in primary hepatocytes with knockdown of lncRHL. The secreted VLDL in the medium was measured using ELISA kit and normalized to total protein (n=3/group). (D) Depletion of MTTP reduces protein levels

of ApoB in culture medium of primary hepatocytes with knockdown of lncRHL (n=3/group). Representative western blot of ApoB protein levels in culture medium of primary hepatocytes with knockdown of lncRHL (upper). Ponceaus S staining as loading control (lower). **(E)** Depletion of MTTP restores protein levels of MTTP in Primary hepatocytes with knockdown of lncRHL. Western blot (left) and quantitative analysis (right) of MTTP and ApoB protein levels. All values are as Mean \pm SEM. * p < 0.05, ** p < 0.01, *** p < 0.001. These experiments were repeated three times with similar results.

Figure S7. Identification of interact protein of lncRHL. **(A)** Proteins associated with lncRHL were visualized by silver staining following RNA pull-down. **(B)** KEGG pathway analysis showed that the global gene expression profiles interacting with lncRHL were highly correlated with Metabolic pathways and NAFLD programs identified from RNA pull-down. **(C)** Mass spectrometry experiment revealed that lncRHL interacted with hnRNPs family proteins in primary hepatocytes. **(D)** hnRNPU binding sites within lncRHL by used online bioinformatics analysis tools (RBPmap, StarBase v2.0).

Figure S8. Knockdown of hnRNPU decreases BMAL1 expression *in vitro*. **(A)** Relative mRNA level of hnRNPU in liver of mice injected with Ad-Scramble or Ad-shlncRHL (n=4/group). The samples analyzed here were from the same samples used in Fig 2. **(B)** Knockdown of hnRNPU reduces mRNA level of *Bmal1* in primary hepatocytes. Primary hepatocytes were transfected with control siRNA or siRNAs targeting hnRNPU (#1 and #2) for 24 h. Total RNA was subjected to RT-PCR

quantification and mRNA levels of hnRNPU and Bmal1 were expressed relative to control siRNA treated cells. (C) Knockdown of hnRNPU reduces protein level of BMAL1 in primary hepatocytes. Representative Western blot (left) and quantitative (right) analysis of protein levels of hnRNPU and BAML1 in primary hepatocytes with or without knockdown of hnRNPU. Primary hepatocytes were transfected with control siRNA or siRNAs targeting hnRNPU (#1 and #2) for 24 h followed by treatments with 400 μ M oleic acid (OA) for 6 h. These experiments were repeated three times with similar results. All values are as Mean \pm SEM. * p < 0.05, ** p < 0.01, *** p < 0.001.

Figure S9. Overexpression of lncRHL rescues expression level of hnRNPU and BMAL1 in lncRHL knockdown primary hepatocytes. (A) Overexpression of lncRHL restores mRNA levels of *Bmal1*, *Gata4*, *Shp* and *Mtp* in lncRHL knockdown primary hepatocytes. After transfected with ssNC or sslncRHL for 12 h, the primary hepatocytes were infected with Ad-lncRHL or Ad- β -gal for 6 h. Total RNA was subjected to RT-PCR quantification and mRNA levels were expressed relative to ssNC treated cells. (n=3/group). (B) Overexpression of lncRHL restores protein levels of hnRNPU and BAML1 in lncRHL knockdown primary hepatocytes. After transfected with ssNC or sslncRHL for 12 h, the primary hepatocytes were infected with Ad-lncRHL or Ad- β -gal for 6 h. Representative Western blot (left) and quantitative analysis (right) of protein levels of hnRNPU and BMAL1 in primary hepatocytes. (n=3/group). These experiments were repeated three times with similar results. All values are as Mean \pm SEM. * p < 0.05, ** p < 0.01, *** p < 0.001.

HPD	cytosol	COX7A2	mitochondrion
EPHX2	cytosol	NDUFB7	mitochondrion
DBT	cytosol	BCKDHA	mitochondrion
AKR1D1	cytosol	GCDH	mitochondrion
CDC42	cytosol	BCKDHA	mitochondrion
DHRS4	nucleus&cytosol	GCDH	mitochondrion
SHMT2	nucleus&cytosol	HOGA1	mitochondrion
HADH	nucleus&cytosol	TST	mitochondrion
UGDH	nucleus&cytosol	ATP5D	membrane
HADH	nucleus&cytosol	GT1A7C	membrane
ACLY	nucleus&cytosol	DAD1	membrane
SHMT2	nucleus&cytosol	DDOST	membrane
TFAM	nucleus&cytosol	ATP5C1	membrane
CoX4I1	nucleus&cytosol	SLC27A2	peroxisome
SCP2	nucleus&cytosol	AP2A2	plasma membrane
PRDX5	nucleus&cytosol	AP2M1	lysosomal membrane
HACL1	nucleus&cytosol	P4HA3	endoplasmic reticulum
SNRPF	nucleus&cytosol		

Supplementary Table S4. Sequences of primers and siRNAs used in this study.

Gene	Primer sequence (5'→3')	Size (bp)	Application
<i>lncRHL</i>	F:CTTCGCTTTCTTCAGTCTTG	20	qPCR

Supplementary Table S5. Antibody list for western-blot analysis.

Name	Detail	Dilution
Rabbit Polyclonal anti-ABCG5	Proteintech(27722-1-AP)	1:1000
Mouse monoclonal anti-Albumin	Santa Cruz Biotechnology(sc-271605)	1:500
Mouse monoclonal anti-APOA1	Santa Cruz Biotechnology(sc-376818)	1:500
Goat polyclonal anti-APOB	Milipore(AB742)	1:1000
Mouse monoclonal anti-BMAL1	Santa Cruz Biotechnology(sc-365645)	1:500
Rabbit polyclonal anti-CALNEXIN	ENZO life sciences(ADI-SPA-860)	1:3000
Mouse monoclonal anti-GATA4	Santa Cruz Biotechnology(sc-25310)	1:500
Rabbit monoclonal anti-HA	Cell Signaling Technology(#3724)	1:1000
Mouse monoclonal anti-hnRNPA2B1	Santa Cruz Biotechnology(sc-374053)	1:500
Mouse monoclonal anti-hnRNPL	Santa Cruz Biotechnology(sc-32317)	1:500
Mouse monoclonal anti-hnRNPU	Santa Cruz Biotechnology(sc-32315)	1:500
Rabbit polyclonal anti-LAMIN B	Bioworld(AP6001)	1:5000
Mouse monoclonal anti-LPL	Santa Cruz Biotechnology(sc-373759)	1:500
Mouse monoclonal anti-MTTP	BD Transduction Laboratories (612022)	1:5000
Mouse monoclonal anti-PCSK9	Santa Cruz Biotechnology(sc-515082)	1:500
Rabbit monoclonal anti-PDI	Cell Signaling Technology(#3501)	1:1000
Mouse monoclonal anti-SHP	Santa Cruz Biotechnology(sc-271511)	1:500
Rabbit monoclonal anti-TUBULIN	Santa Cruz Biotechnology(sc-9104)	1:500
