

Figure S1:

Flowchart depicting participant and sample numbers in this substudy, with reasons for exclusion and missing data where available.

Table S1: Characteristics of 965 participants who consented to both main trial and substudy, were randomised in the main trial, but did/did not have blood included in analysis.

		No eligible blood in substudy (n = 77)		Blood included in substudy (n = 888)	
		Count	Column N %	Count	Column N %
Gender	Female	16	20.8%	151	17.0%

Daytime sleepiness (ESS at baseline)	0-10	59	76.6%	636	71.6%
	11-15	18	23.4%	252	28.4%
Obesity (BMI at baseline, kg/m ²)	≥30	15	20.0%	350	39.5%
	<30	60	80.0%	537	60.5%
Cardiovascular disease history at baseline	Cardiac only	36	46.8%	584	65.8%
	Cerebrovascular only	41	53.2%	263	29.6%
	Both	0	0.0%	41	4.6%
Diabetes at baseline		12	16.0%	274	30.9%

OSA = obstructive sleep apnoea; ODI = oxygen desaturation index, events/hour; ESS = Epworth Sleepiness Scale score; BMI = body mass index.

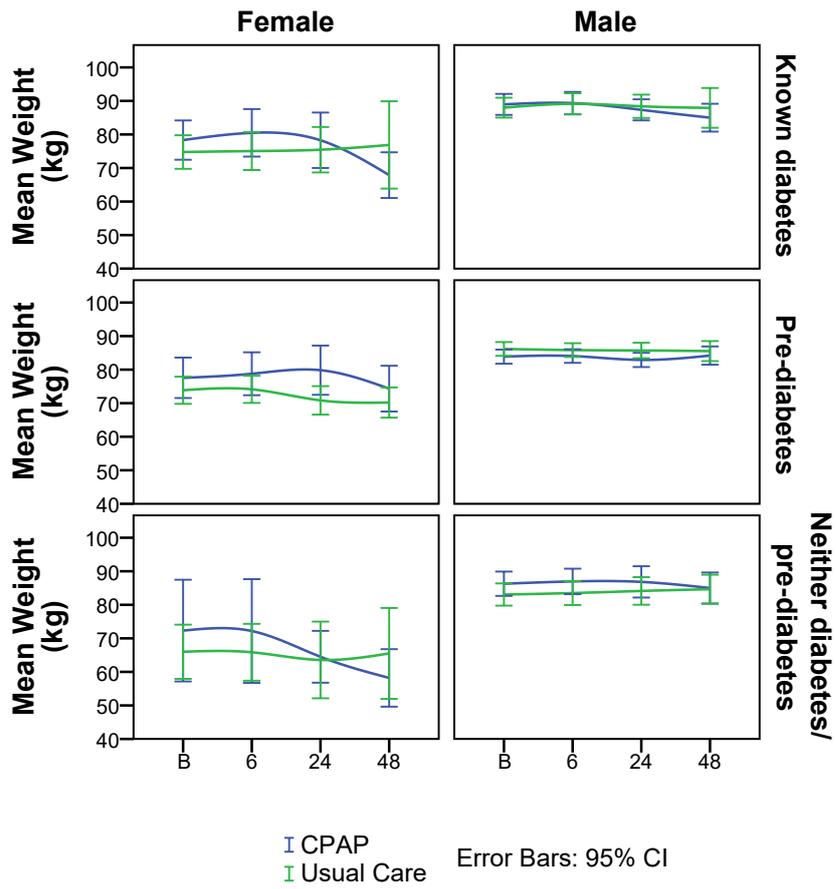

Figure S2: Weight (kg) in CPAP (blue) and Usual Care (green) treatment groups. Observed mean and 95% CI from all available observations.

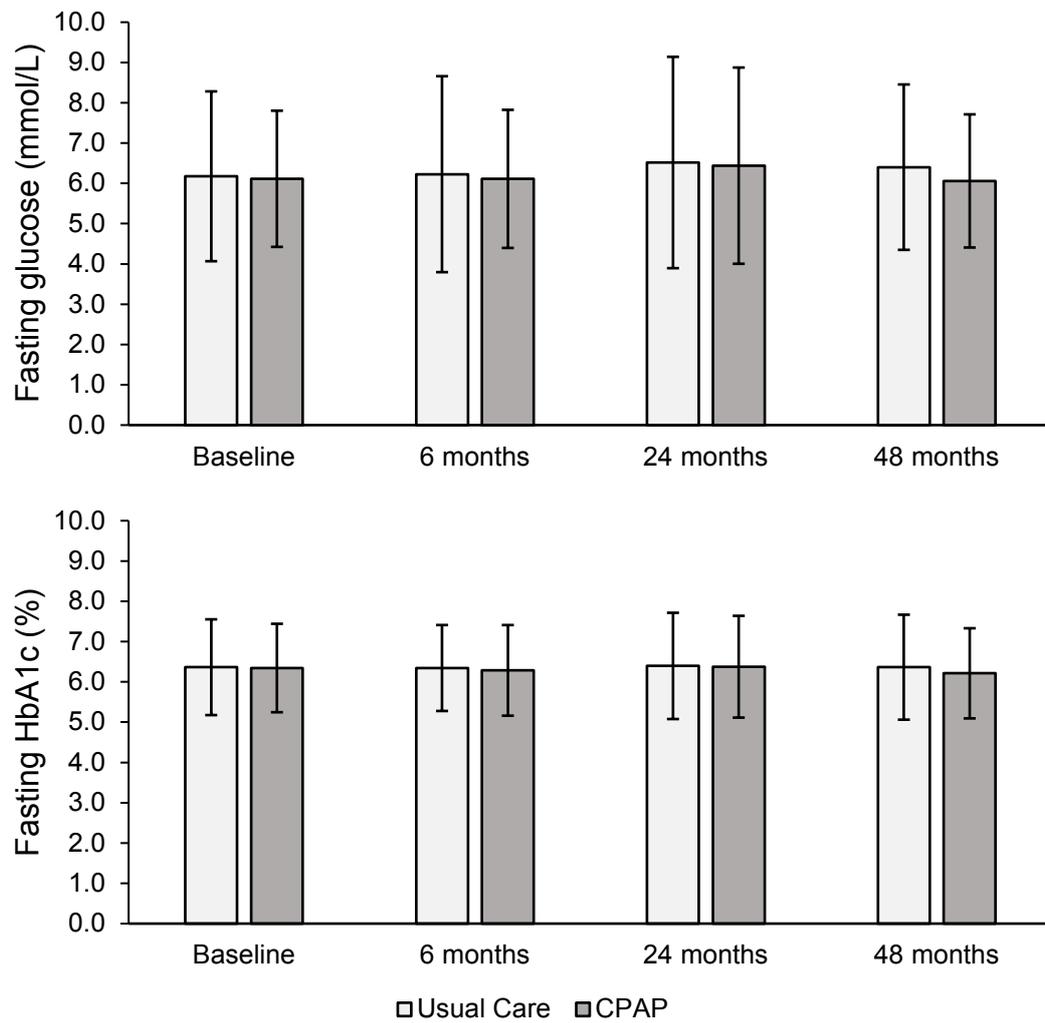

Figure S3: Fasting serum glucose and HbA1c in CPAP (dark grey) and Usual Care (light grey) treatment groups. Observed mean and standard deviation from all available observations.

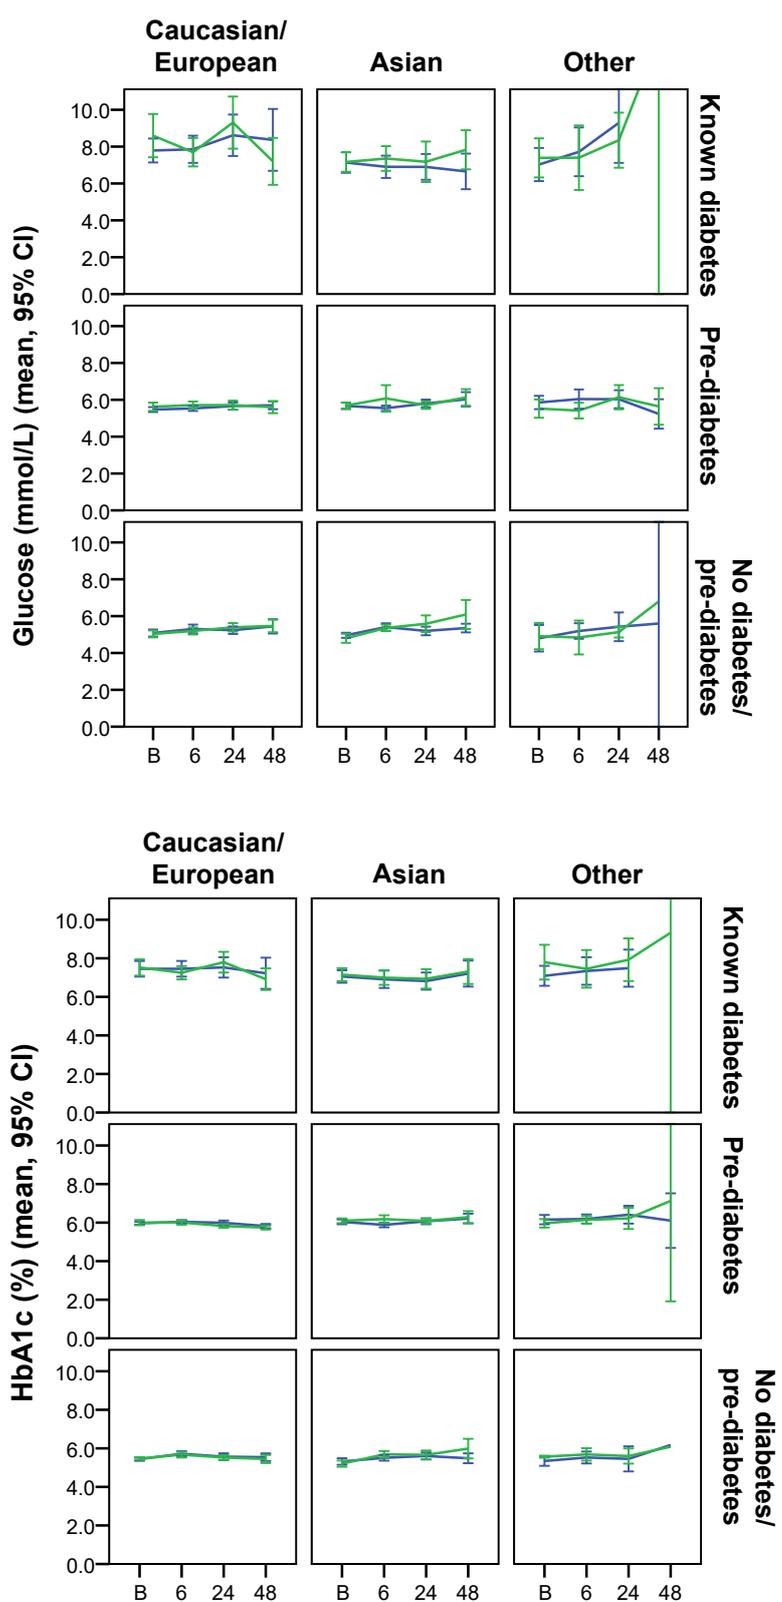

Figure S4a:

Fasting serum glucose and HbA1c in CPAP (blue) and Usual Care (green) treatment groups according to baseline diabetes status and self-reported race/ethnicity.

Estimated marginal means and 95% confidence intervals from linear mixed models. Due to small numbers of participants remaining, the error bars in the "Other" race/ethnicity group at 48 months are very large, extending beyond the scale of the figure, and for simplicity have been omitted from the plot showing HbA1c. X axis represents the timecourse of analysis, B = baseline, 6, 24 and 48 months.

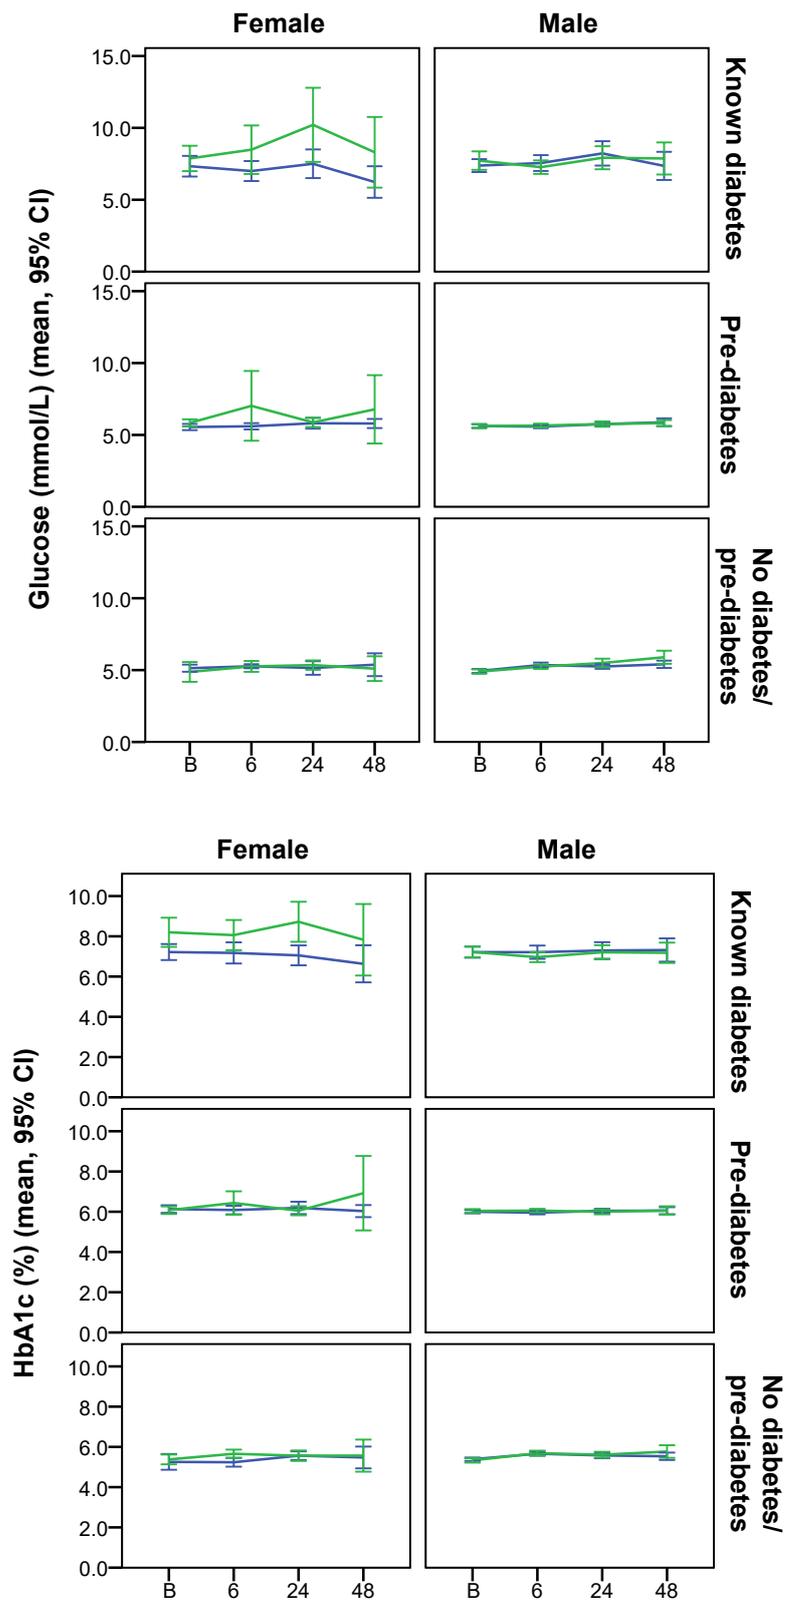

Figure S4b:

Fasting serum glucose and HbA1c in CPAP (blue) and Usual Care (green) treatment groups according to baseline diabetes status and sex. Estimated marginal means and 95% confidence intervals from linear mixed models. X axis represents the timecourse of analysis, B = baseline, 6, 24 and 48 months.
