

Supplemental figure 1—Relationship between HbA_{1c} and (A) time in range (TIR), (B) time above range (TAR) and (C) time below range (TBR). The solid lines represent the best fit. The best fit in (A) is an exponential regression of 2nd order, in (B) linear regression and in (C) an exponential regression of 2nd order. The dotted lines represent the 95% prediction bounds.
