

Methods and Legend for Supplementary Data Table 1:

Method:

We used the Slicer Dicer Tool inside Epic Cosmos™, a federated database similar to TriNetX™, but with a greater number of medical records (> 139 million) distributed geographically similar to those of the TriNetX database. Identical search terms and temporal flows were used in these searches as described for the TriNetX database searches.

Table Summary:

The incidence of T1D at 1-6 months from a confirmed-positive SARS CoV-2 PCR test in non-T2D subjects in the 0-30 year old age range for the period March 1 2020 – July 15 2021 is not greater than the incidence of T1D in non-COVID, non-T2D individuals for the periods January 1, 2019 – January 1 2020, and January 1, 2018 – January 1, 2019.
