

Appendix 2. Comparison of Demographics and Clinical Characteristics in Full Cohort vs Overlapping Samples

	Full Cohort (n=138)		Overlap (n=55)	
	Freq Mean	% Stdev	Freq Mean	% Stdev
IA Progression Phenotype				
Progressor	25	18.12%	23	41.8%
Reverter	47	34.06%	10	18.2%
Maintainer	66	47.83%	22	40.0%
Multiple Autoantibodies at Onset of IA*, n (%)	11	16.7%	15	27.3%
Non-Hispanic White Ethnicity, n (%)	47	71.2%	43	78.2%
Female Sex, n (%)	35	53.0%	28	50.9%
DR3/4 Genotype, n (%)	17	25.8%	22	40.0%
Family History/Affected First Degree Relative, n (%)	42	63.6%	33	60.0%
Age at Onset of IA*, mean (Stdev)	8.6	4.5	8.8	4.9

*Onset of IA defined as the first study visit among the first two consecutive study visits where the individual tested positive for one or more autoantibodies
