

Supplementary Table 5: Table of the multiple regression model (ANOVA II) expressing the peroneal nerve conduction velocity (NCV) as a function of height, standard deviation of mean glucose (Glucose SD) representative for glucose variability, and the interaction between these two explanatory variables.

	SS	df	F	p
Height (cm)	314.05	1	37.61	<0.001
Glucose variability (Glucose SD)	86.90	1	10.41	0.002
Height x Glucose SD	59.77	1	7.16	0.010
Residuals	367.45	44		
n = 48, R ² = 0.580, F _(3, 44) = 20.29, p < 0.001
