

Supplemental Figure 1.

Assumptions of Mendelian randomization: 1) The variants must be associated with the exposure of interest; 2) The variants must not be associated with confounders of the relationship between the exposure and the outcome; 3) The variants must be independent of the outcome except for their association via the exposure. SNP: single nucleotide polymorphism; C: Confounders

Supplemental Table 1. Details of the 270 single nucleotide polymorphisms (SNP) used as a genetic instrument for type 2 diabetes in Mendelian randomization analyses. Beta coefficients and standard errors (SE) for the association of each SNP with type 2 diabetes from the European DIAMANTE genome-wide association study. Outlier SNPs identified using radial MR.
