

Appendix 6. Network Module Candidates Where Module Eigengene Explained >60% of Variation

| Module Name | Size | Proportion Variance Explained | Nominal p value | FDR Adjusted P Value |
|-------------------------|------|-------------------------------|-----------------|----------------------|
| Average Model | | | | |
| darkolivegreen | 15 | 0.66 | 0.0395 | 0.1579 |
| yellowgreen | 11 | 0.69 | 0.6702 | 0.8699 |
| paleturquoise | 17 | 0.66 | 0.7187 | 0.8699 |
| white | 27 | 0.60 | 0.8699 | 0.8699 |
| Difference Model | | | | |
| darkred | 14 | 0.69 | 0.0056 | 0.0223 |
| darkgrey | 10 | 0.69 | 0.5600 | 0.8586 |
| darkturquoise | 11 | 0.64 | 0.6905 | 0.8586 |
| darkgreen | 12 | 0.61 | 0.8586 | 0.8586 |

Proportion of variance explained = proportion of variance explained by eigengene of 1st principal component from PCA that includes all genes within the module

*Adjusted based on Benjamini-Liu method
