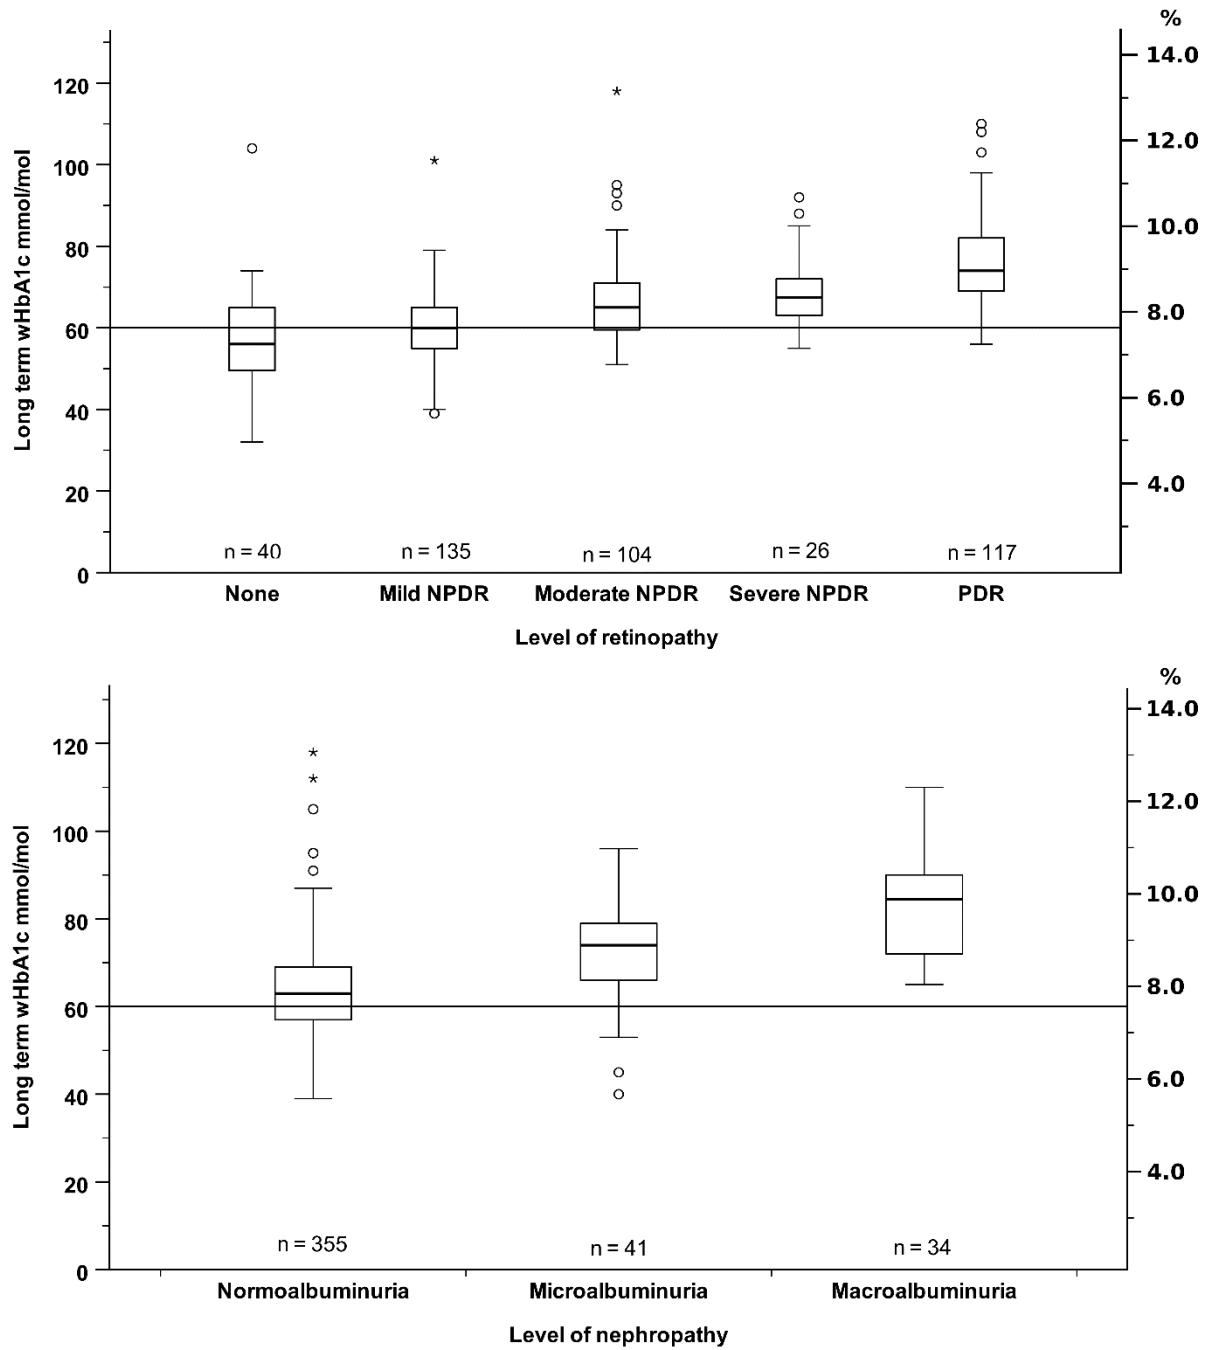

Figure S1 HbA1c range in the VISS cohort of patients with type 1 diabetes. Boundaries of box plots show quartiles, whiskers show nonoutlier range, unfilled circles show outlier and asterisk shows extremes. **A.** Different levels of retinopathy, diabetes duration 32(24;34) (median, IQR) years, range 6-36 years. The three patients with no to moderate retinopathy and

very high wHbA1c, >11.3% (>100 mmol/mol) had diabetes durations <16 years. **B.** Different levels of albuminuria, diabetes duration 33(31; 35) (median; IQR) years, range 8-36 years.

Supplemental Table S1 Data for BMI, blood pressure and lipids at the last follow up in relation to diabetic retinopathy and nephropathy in the VISS cohort 32-36 years after diabetes diagnosis.

*NPDR = non proliferative diabetic retinopathy; †PDR = proliferative diabetic retinopathy; ‡P values are based on two sample *t* test or one-way ANOVA with Bonferroni post hoc test. To convert from mg/dl to mmol/l for cholesterol multiply with 0.02586, for triglycerides with 0.01129.
